INTRODUCTION

A competitive but also receptive, an innovative and imaginative individual with a productive and positive mindset. Once a good idea and a concept have been set out, outlining and setting things up straight away is my way of dealing with the hardships of getting started, because my personality allows me to keep going with finishing things that I have started. When working in small groups, I am able to motivate my teammates, lift their mood up and influence them with my positivity when they feel down.

SKILLS

EXPERIENCE

Backend Developer Nov, 2020- April, 2021

An Internship which targets creating a screen-based user interface for AGE wristbands for hospitals in the UK. I was in charge of building the server architecture and server communication using tools such as GoLang and GraphQL, as well as building a dummy data generator tool using Python for API testing purposes.

Full-stack Developer Oct, 2020- May, 2021

A Final Year Project which uses Spotify API as the baseline for song searches, song analyses and audio streaming. The project is an Emotion-Based Music Streaming App which prioritises user's moods to play songs.
